

# **Doncaster's Health Improvement Framework 2015**

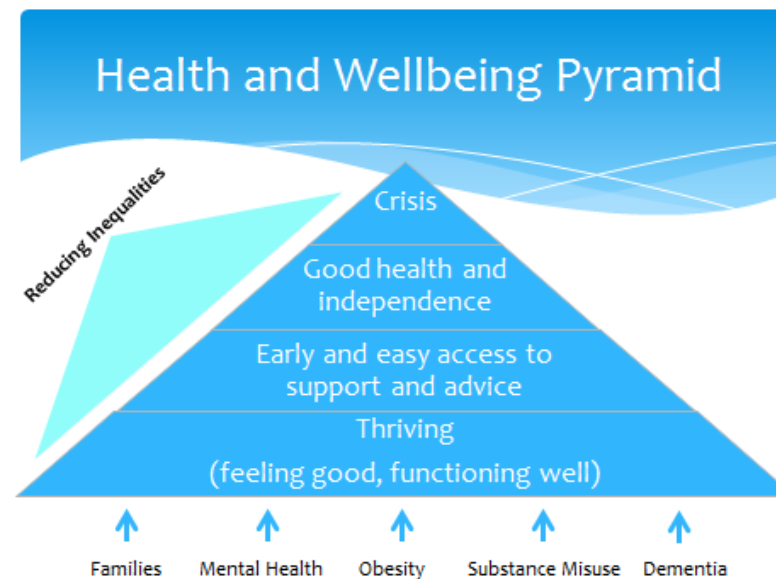

## What is the Health Improvement Framework?

The Health Improvement Framework is a tool developed by Public Health England that the Doncaster Health and Wellbeing Board is using to gather information about the services that are available to improve the health and wellbeing of Doncaster residents throughout their lives. It provides a common understanding of areas for health improvement and an agreed vision; it also sets out priority areas for action to improve health outcomes for partners working across the Borough to target. The complex nature of underlying factors means it is unlikely that a single organisation or service is able to address the issues in isolation but in working collectively by bringing together skills, resources and ideas, the vision for health improvement can be achieved.

The Framework underpins the vision of the [Health and Wellbeing Strategy 2016 to 2021](#)\* that 'Doncaster people enjoy a good life, feel happy, healthy and safe, and agree Doncaster is a great place to live'.

\*Please follow the link for more information

The diagram below illustrates the different levels of intervention and areas of focus of the Health and Wellbeing Strategy; ideally, the Board would like all Doncaster residents to feel good and function well. But in reality we know that there are times when people require a bit more support and this should be easily available when it is needed; people should be supported to remain independent during their lifetime but also know that at times of crisis services are in place to meet that need. The Board also has a commitment to ensure that it works to reduce inequalities and needs to embed this across all levels of intervention.

The Framework and the Health and Wellbeing Strategy not only recognise the many different underlying factors that have an effect on a person's health and wellbeing, they also recognise that action at various stages of life has a positive impact in improving health outcomes. To break this down the Health Improvement Framework is set out in a way that reflects the Well Programmes which were developed in response to Professor Sir Michael Marmot's [Fair Society, Healthy Lives](#)\* report and the National Public Health Strategy [Healthy Lives, Healthy People](#)\*.

The categories are set out below and grouped into People, Places and Communities:

#### People

[Starting Well](#)  
[Developing Well](#)  
[Living Well](#)  
[Ageing Well](#)

#### Places

[Homes and Housing](#)  
[Schools and Colleges](#)  
[Workplaces](#)  
[Built and Natural environment](#)  
[Health and Care settings](#)

#### Communities

[Healthy, sustainable resilient communities](#)  
[Social networks, social capital and community development](#)

Each category gives an overview of its importance along with a vision followed by a table including actions that support the vision. As shown in the example below all actions have been put into a template; the information to the left of the dark line is an overview of the work taking place to support the action and by which organisation. The information to the right hand side of the line shows how all the work listed to the left relates to the Health and Wellbeing Strategy and Public Health Outcome Indicators.

<b>Strengthen local leadership through the Health and Wellbeing Board and focus on early years as a strategic priority reflected in the Joint Strategic Needs Assessment (JSNA) and Health and Wellbeing Board Strategy.</b>		
<b>What action is taking place</b>	<b>By who</b>	<b>Links to Health and Wellbeing Board Strategy</b>
This section provides an overview of work that is taking place at that point in time.	By which organisation	<b>Links to Public Health Outcomes Framework indicators</b>

The information gathered within the Framework has been taken from a collection of 'conversations' with partners during the course of 2015, either in person or virtually. The Framework provides a point of time indication of the variety and volume of work that is taking place across Doncaster to improve the Health and Wellbeing of Doncaster residents. It also demonstrates action taking place to meet the Public Health Outcomes Framework Indicators.

**Please note this document is only a snap shot in time and is not an exhaustive list of activity being delivered across the Borough**

## PEOPLE

### Starting Well

#### Why is this important?

Starting well in life is vitally important for every child born today. The first three years of a child's life directly influences their health and wellbeing as a child, and later as an adult. What happens during early years' impacts on their risks of long term ill health such as weight gain, substance misuse, risk of heart disease, and their mental health. The first few years of life are critical for readiness to learn, educational achievement and ultimately wealth and economic status, a strong predictor of future health and wellbeing.

Living in a healthy, caring family and community helps most children reach their potential. A nurturing environment builds a child's resilience and sets children up to succeed in all aspects of later life. Not all children experience all these basic needs for good development and there is a gradient in experience of good nurturing care and the right resources for growth. This means that a good universal child health system for every mother and child needs to also have additional and more targeted support for children and families with greater need to achieve good outcomes for all children.

#### Our vision:

That every child reaches their full potential at age 5

#### What the Health Improvement Framework says:

<b>Strengthen local leadership through the Health and Wellbeing Board and focus on early years as a strategic priority reflected in the Joint Strategic Needs Assessment (JSNA) and Health and Wellbeing Board Strategy.</b>

## PEOPLE

## Developing Well

### Why is this important?

Seeking good health and wellbeing for school age children and young people in the transition to adult life can have a hugely positive impact on their future. Five of the ten most common risk factors in adult disease are formed during adolescence, including mental health problems and obesity.

This period of young people's lives marks significant and unique changes, they take on greater independence and widen their awareness of the world around them. As children progress through school, they gradually assert greater autonomy, with family and friends remaining essential sources of support and advice. In the modern world external pressures, such as the media, social networks, advertising, also exert influences, and not always positive ones.

Supporting children and young people at this stage therefore is important in the short term, as well as setting the stage for healthy, productive adults. Some children and young people have not had the good start in life that they needed and so may need additional services or more intensive or specialist support to enable them to reach their full potential ready for adulthood.

### Our vision:

That every school age child, and young people should be kept safe from harm, able to develop their potential and feel ready for adult life.

### What the Health Improvement Framework says:

**Provide local leadership through the Health and Wellbeing Board and ensure that the specific needs for this age group are fully reflected in plans and priorities with a focus on those children and young people who are most vulnerable.**

What action is taking place	By who	Links to Health and Wellbeing Board Strategy
Refresh of Health and Wellbeing Strategy to ensure priorities are captured through Areas of Focus and Outcomes Based Accountability.	Health and Wellbeing Board	All

## PEOPLE

### Living Well

#### Why is this important?

Living well in adult life is important not just to adults themselves, but to the children, young people and older people they support both financially and by caring for them. Working age adults support the welfare state and civic society through income generation and paying taxes and it is vital that physical and mental health are protected and promoted with equal focus.

People continue to grow and develop from early adulthood where they start to live with financial independence through their first employment, into established adults forming families, long term relationships and making longer term life choices, and then into mature adulthood where attention starts to focus on planning for older age and a healthy retirement.

At every point in an adult's life there is potential to improve health and wellbeing, prevent diseases such as diabetes, musculoskeletal disease and cancer developing, as well as minimise the complications or progression of existing disease yet we know that often this group don't engage with services. To maximise opportunities for prevention there must a focus on reducing risky behaviours, utilising opportunities like NHS Health Checks to access support and advice. Across the adult life course there are particular groups and communities who may have specific needs such as those from Black and Minority Ethnic communities.

### Our Vision:

Every adult should be able to achieve a state of health and wellbeing that supports their social and economic independence, and help them provide a safe and stable environment for those they support.

### What the Health Improvement Framework says:

Implement integrated behaviour change programmes which influence population level behavioural change to increase healthy lifestyles and reduce the burden of disease.

## PEOPLE

### Ageing Well

#### Why is this important?

As our population ages it is vital that maintaining and improving physical, mental, social and economic wellbeing of older adults is a priority. Older people contribute substantially to society; about half of all carers in the UK are over 50 years old and older people are the mainstay of many voluntary organisations with over 40% of those aged 65-74 years volunteering.

Far too many older people are in ill health, living in poverty and are socially isolated. Among the poorest, few will pass the age of 57 years without a disability, and only the richest 10% will reach the new retirement age of 68 years without a disability. This need not be the case. Disability and impairment are not inevitable, nor are they irreversibly linked to poor health and isolation.

There is much that can be done to maximise the potential of older adults and enable them to live happy and fulfilling lives and die well and with dignity. Interventions such as seasonal flu vaccination, falls prevention, tackling fuel poverty, community development projects to reduce social isolation and the opportunity of the NHS health check and health checks for carers all have the potential to support everyone to age well and die well.

#### Our vision:

That older adults should be a valued part of our society, able to live full and active lives for as long as possible and to be cared for in the best possible way for them up to the end of their life.

**What the Health Improvement Framework says:**

Ensure that there is an integrated community wide approach to end of life which engages beyond palliative care services to deliver dignity, choice and support for individuals dying and those who survive them, stating this publically through signing up to the Good Death Charter.		
What action is taking place	By who	Links to Health and Wellbeing Board Strategy

## PLACES

### Homes and Housing

#### Why is this important?

An affordable, suitable, warm, safe and secure home is a fundamental building block of good health. Living in suitable housing promotes good health and wellbeing. It prevents many health problems including circulatory diseases, mental health problems, respiratory problems, particularly in children and accidents in the home.

Many homes in England are not of a good enough standard to provide optimal health conditions. Homes need to be healthy, warm, and safe to prevent injury and disease, and be secure from intruders. Poor housing increases risk of illness, demands on health services, ability to participate in education and work and increases inequalities in health. Housing needs to be suitable for type of need such as age or ability. Housing that offers security of tenure for the long term underpins long term health potential. There is more that can be done to improve health for the homeless, those living in temporary accommodation and those in substandard dwellings.

#### **Our vision:**

For people to live in safe warm and secure homes that meet their individual and family needs: - a home in which to 'start well, live well and age well'.

#### **What the Health Improvement Framework says:**

<b>Assess and evaluate the impact of homes and homelessness on health and wellbeing as part of the Joint strategic Needs Assessment, and take this into consideration in all local commissioning.</b>

## PLACES

### Schools and Colleges

#### Why is this important?

The experiences that children and young people have within the settings in which they learn, as well as their level of educational attainment, impacts on self-reported health and wellbeing and contributes to life expectancy and future health and wellbeing.

Promoting health and wellbeing within schools and colleges can improve educational attainment, and conversely schools and colleges that deliver value added education are also likely to offer value added health and wellbeing. Not only do education settings provide key opportunities to influence knowledge, attitudes and behaviours of children and young people, but they also provide opportunities to influence staff and parental/carer health and wellbeing.

There is strong evidence to support the efficacy of a whole-school approach in supporting improvements across a range of public health outcomes for children and young people.

Schools are also places where young people can find nurture, support, encouragement and skills development that can mitigate the impact of other social and economic disadvantages they may have experienced earlier in their lives, improving their life chances and outcomes.

#### **Our vision:**

Every school and college to be a healthy place to work and learn, and every learner is equipped with skills for life.

#### **What the Health Improvement Framework says:**

<b>Provide schools and colleges with data and intelligence concerning local health and wellbeing for school/college age population.</b>		
<b>What action is taking place</b>	<b>By who</b>	<b>Links to Health and Wellbeing Board Strategy</b>
School Nursing work with schools to produce a school health plan. This collates national, local and anecdotal evidence from the area to agree and prioritise the health needs of the schools, activities and services are then designed to meet those needs. Community safety staff will arrange to visit the family home to complete a home safety check and deliver a session plan, which builds on and reinforces the fire safety messages given in schools at Key Stages 1 and 2. The session involves all members of the household.</p>	<p>RDASH Children Young People and Families provision</p> <p>SYFR</p>	<p>Reducing inequalities Wellbeing Families</p> <p><b>Links to Public Health Outcomes Framework indicators</b> <b>Improving the wider determinants of health</b></p> <ul style="list-style-type: none"> <li>• School readiness</li> <li>• Pupil absence</li> </ul>

## PLACES

### Workplaces

#### Why is this important?

Workplaces are a key setting for improving people's mental and physical health, as well as their overall wellbeing. However, just being in work is not enough. It is often the quality of work that matters. High quality workplaces are characterised as providing a source of purpose, friendship, routine and regular income.

Whilst being in work is generally protective of health and being unemployed is likely to have a negative impact on health and wellbeing, both unemployment and poor quality work must be addressed to have a significant impact on health and wellbeing and reduce inequalities in health outcomes. Enabling access to work for those who find it harder to gain good employment such as those from minority ethnic communities and those with mental health problems and disabilities has great benefits both for health and for the economy.

There is still much to be done to reduce unhealthy and dangerous workplaces and support inclusive and responsive workplaces that meet the needs of a diverse and ageing workforce and tackle the major causes of sickness absence that include stress and anxiety and lower back pain. Given the link with productivity and staff absence rates, supporting employees to improve their health and wellbeing also makes good business sense. Many organisations understand this, and protect and promote their staff's health and wellbeing. The challenge is to spread this good practice to all organisations across the country – whatever their size and sector.

### Our Vision:

All employers to protect and promote the health and wellbeing of their staff, and for workplaces to become a key setting for promoting healthy lifestyles for those moving into and out of the workforce.

### What the Health Improvement Framework says:

<b>Demonstrate commitment through becoming exemplars of best practice as local employers and requiring action on workplace health through their contracts with providers.</b>		
<b>What action is taking place</b>	<b>By who</b>	<b>Links to Health and Wellbeing Board Strategy</b>
Lead by example. The council should be seen to support all staff. Develop and support to live/work with health conditions.	DMBC	Wellbeing All Areas of Focus Reducing inequalities
Support the rollout of the Workplace Charter within our team and DMBC. Work with partners/providers to ensure employees are supported to make lifestyle changes and also to work to support the charter through the service they offer. ## PLACES

### Built and Natural Environment

#### Why is this important?

The built and natural environments are major determinants of health. The impact on our health and wellbeing caused by buildings and access to clean air and green space has been recognised in a number of recent reports including the Marmot Review. While good housing is important to our health there are other elements of local places that impact on our opportunities to stay healthy. These include connectivity and transport to reach work, services and healthy foods. Access to green space and play facilities are important for mental health as well as physical activity. A high quality public realm needs to have good design that is visually attractive and promotes social support and community cohesion, while respecting biodiversity and sustainability requirement. Good places reduce inequalities in access that helps with reduction in inequalities in health.

The quality and design of homes, buildings, public spaces, neighbourhoods and transport has a direct impact on factors such as noise and air pollution which can both harm health. The built and natural environment can also help promote or hinder health factors such as physical activity, mental wellbeing, community safety and access to healthy food. Therefore the planning and design of our public spaces and built environment are of fundamental importance for the wider social environments that support or hinder good communities and the creation of healthy living spaces for people of all ages.

#### Our vision:

Everyone, wherever they live, should be able to live, work and play in a place that promotes health and wellbeing; sustains the development of supportive and active communities; and helps reduce health inequalities.

#### What the Health Improvement Framework says:

<b>Recognise the importance of good local places for wellbeing and mental health, promotion of physical activity, enhancing community connectedness and helping with community safety. There should be a “read-across” between the local plan and health and wellbeing strategies informed by the JSNA.</b>		
<b>What action is taking place</b>	<b>By who</b>	<b>Links to Health and Wellbeing Board Strategy</b>

## PLACES

### Health and Care settings

#### Why is this important?

There are millions of contacts every year within our healthcare services both systematic for example, immunisation, and ad-hoc - when a patient presents with symptoms. These settings provide opportunities for the early detection of many conditions, and equally importantly the provision of advice and support for individuals and families to help and support them in adopting healthy lifestyles to support them lead healthy, long and productive lives.

In a similar way, many of those who could benefit from such support and help are also often routinely in contact with professionals within the social care and voluntary sectors. These contact opportunities start before birth, during maternal and early years care when the positive effects of good maternal health can have a real impact on the health of the child, and all through life. Each contact with health and care professionals presents a unique opportunity for raising awareness of healthy lifestyles and their positive impact on how long we live and our quality of life. In particular, the NHS is a universal service which is particularly effective in reaching to all groups of the population, for example when it delivers universal population health-care programmes. These provide a particularly good and non-stigmatising opportunity of reaching out to support and inform individuals to make healthy choices and to access best support such as smoking cessation.

#### Our Vision

Every child, their family and adults can achieve their optimal health and wellbeing by positive advice and support and services to achieve a healthy life as a result of contact through their life course with health and social care professionals and voluntary sector, irrespective of their circumstances.

#### What the Health Improvement Framework says:

<b>Provide leadership through health and wellbeing boards to ensure that evidence based prevention and health and wellbeing programmes are commissioned jointly by local authorities, NHS and voluntary sector.</b>

## COMMUNITIES

### Healthy Sustainable resilient communities

#### Why is this important?

Our actions in the coming decade will determine the health and wellbeing of our children and many generations to come. The world we live in is changing rapidly. Environmental changes, notably climate change, threaten our lives on an unprecedented scale, and social changes, such as changes in the economy, impact on every aspect of our health and wellbeing. These impacts are not fairly distributed. The public health system plays a fundamental role in enabling our communities to become sustainable and resilient. Developing resilience enables people to cope with change which is inevitable or unexpected. Becoming sustainable means changing how we live so we don't further undermine our future.

We are at a critical point. We need to take action to reduce the scale and impact of both climate change and health inequalities together. While the NHS is providing free access for all it also has the opportunity to provide more intensive support to more marginalised and excluded groups in our society to help improve their health chances.

**Our vision:**

Everyone to live in healthy sustainable resilient communities.

**What the Health Improvement Framework says:**

<b>Expect every service they provide and commission to reduce their environmental impact in line with or greater than the targets in the Climate Change Act (2008).</b>		
<b>What action is taking place</b>	<b>By who</b>	<b>Links to Health and Wellbeing Board Strategy</b>
Through SYFR Environmental Policy, in line with national expectations. ## COMMUNITIES

### Social Networks, social capital and community development

#### Why is this important?

Strong communities, families and social networks protect and promote health and wellbeing and help address inequalities. Communities where people from different backgrounds come together more frequently have shared interests, goals and values, and look after the vulnerable through for example volunteering, have less social isolation, less risky behaviours and are more engaged in shaping public services to meet their aspirations.

Communities with high trust, neighbourliness and a sense of belonging have lower crime. Children living and studying in communities with higher social capital have better self-esteem, emotional wellbeing and are more likely to stay in education.

Community development gives a voice to the most vulnerable in society. It addresses imbalances in power and brings about change based on social justice, equality and inclusion. It empowers communities to play a positive role in democracy, civil society and improve the quality of their own lives, their health and wellbeing and the communities of which they are a part.

#### **Our vision:**

Everybody to live within a supportive community environment that provides opportunities to develop their potential, contribute to society, and participate in creating their own and their neighbours health and wellbeing.

#### **What the Health Improvement Framework says:**

<b>Recognise that all the services from leisure and parks, libraries, arts, and refuse collection have the potential to increase local social connectedness through creating opportunities for people to interact.</b>		
<b>What action is taking place</b>	<b>By who</b>	<b>Links to Health and Wellbeing Board Strategy</b>
Utilise our database/social media to spread information.	Healthwatch Doncaster	Wellbeing Mental Health Reducing Inequalities
Contribute to projects designed to increase feelings of community. This could be through tweets, facebook and blogs. DCLT has 16 local venues as community hubs with a variety of programmes to encourage attendance.
